

Krishnan

Earlier, around 8:30, uh... Good morning, good afternoon, Krishna and Orlando. Oh, you must. Good morning for you. 9 o'clock in the morning? 8:30? Yeah, my morning starts early, uh, Krishna. I, because I was in client engineering, I was worldwide, so. Um, I had no schedule. It was pretty crazy, yes. Thank you for taking the time to meet with me. Um... So, let me just, I know we have less time. I want to be sensitive, so I'm gonna, uh, spend just 5 to 10 minutes, giving a quick status update on, um, uh, on the what has been. So I just, because I'm, like, connecting account teams to product teams and so forth, I just started calling the relation which I had with product management, product connected is by no means the name of a program, but this is just the way I think about myself, product connect. So I'll start with what the um, objective is, what the objective I was given for and um, also what I see a lot of the accounts when they are stoled. I'm getting involved in a lot of the, in a lot of the, uh, stalled, you know, when they're not getting the right support from product management, when there is an issue with the roadmap, uh, with, uh, when the account team, like state farm is a good one. Planning analytics, they were not really happy with the updates which were done upgrades a year ago. So they still have an upgraded to the latest version and we are getting them extended support for a year because, and they refuse to, The ELA is at risk just because they're saying, why don't you fix your earlier problems 1st before we do that? Aligning the core to more mission with the core software team, Priya's team, um, and a lot of the team said that the time it takes for product management to help us when we are stuck. Um, that is also along. So that I thought, you know, is the objective and Rolando and I touch base almost pretty often, I feel. Um, So what is life right? Sorry, sorry, Orlando. At least weekly. Yeah, every Monday morning at a minimum. Yes, yes, yes. Yeah. Well, and our Slack channel is pretty active as well. And I appreciate you engaging me on all the business value engineering discussions, and the reference architecture discussions, and everything as well. Um, I love to feel needed. So I appreciate that. Um, so, uh, what is what is been done right now? Live is incorrect terminology here. What has been done? I presented our mission in Priya's leadership, and Priya, um, I'm sure you've met with her, extremely enthusiastic, totally in what can we do, Monica? So she has assigned her program director and her chief of staff to work with me on almost a daily basis. So I have a daily log checkpoint with them. Um, and, you know, we uh, talk about stuff like, okay, here's the AI edition enablement seismic page, which their organization has built. How can we enable our CSC? So we have that weekly. So for instance, DB2, a lot of the clients think that DB2 is legacy database. And when they are thinking about modernization of their database, usually IBM is not in the picture, so they're looking at cockroach, you know, which is again a partner or other, uh, databases as well. So, uh, we've started a weekly AI edition enablement. So at least our CSEs, no, are aware what is

there. Then when I said, um, It's hard for us to find the roadmap, or it's hard for us to find the, uh, product um, product manager. So Priya said give me feedback. Give me concrete results, Monica. So I have that going. I have a few volunteers working with me on giving her a real solid feedback. They've shared who's who with me, which includes the product manager for each of their products. Now, Priya doesn't have all of our core software. There's stuff which is under Ritika as well. I don't have a connect with Ritika. I have a pretty strong connect with with Priya. A lot of the data, like WhatsApp, extra data, business intelligence, planning, analytics is under Ritika. And of course, the app run time was is under Mark, uh, I forgot his last name. Uh, then there's like, yes. Mark Abard. Yes, yes. Product version validation there. This is their last week of Q1. So product management is a little busy. Um, helping account teams were stalled and it's not just FSM. Um, So I'm getting a little slow result from them. One of the thing which is very confusing is I'm just going to switch move here to key risks is the packaging ambiguity. Because all of the AI editions, DB2, MQ, business automation workflow. The way to modernize them is with agents, and which is what I had mentioned to you, Krishna, when you had joined our meeting, right? With agents. So now, I came back to them, because Rolando conveyed to me the ask, that does it come with an orchestra free license? And it does not. Most of the time it does not, and a lot of the times it's not even an orchestra agent. It could be clawed. It could be something else as well. A lot of the times they're asking, they have a list, which they are building like a concise list, which we can put there. Is that we ask the clients to bring their own license of the agent, or if they have their own agent, they can make it so that it runs with this AI addition enablement. Uh, Software. A reference architecture scope. I'm still, um, Thank you for the clarification. Yes. The agents, what are you, what are you saying is that all these products are coming up with their own agents? Is that what you say? Yes. So business automate, let's take business automation workflow, which is my husband, my bread and butter, at my previous client organization. Um, it was a workflow, right? And now, they put agents on top of it. So an agent can basically trigger a workflow. So if I'm talking to an IT service agent, that agent, if it needs to take action, like if it needs to go and open a ticket, um, and assign a task to an SME, It can trigger a business automation workflow. Similarly, within the business automation work, and the same applies, similar applies to BAMOE as well. In between any of the tasks, if there is a tasks in which an agent needs to be invoked, then it can do that. DV2, they're, uh, advertising autonomous databases, which means an agent will continuously be looking out for, so, removing the need for a human DBA. Uh, for some, for some things, of course, not for everything. But like constantly, an agent is always looking, am I going over? Is this going, is the memory getting filled up? What is it doing? So that's another example for an agent in DB2, and they have similar ones in MQ, and other products, other core software products as well. Does that help? Yeah, it helps, but see, the, the, the clarity will, which, probably, would be more interesting as, Is it an agent that runs on LLM or it is just a small, tiny piece of complement, which is rebranded as an agent, which is something else. Yeah. Yeah.

And I don't know that. So, uh, in these uh, weekly enablement sessions, the product leader, the product manager, so this, there's one on Friday in which Miran, Budwazek, The DB2 director is going to come and present. So I've asked him to do like a 20 minutes of technical presentation in which he'll present the reference architecture, what the AI edition is. And then it will be 25 minutes. So in there, they will cover how is the architecture actually and is it just an LLM? Or is it a vendor LLM? What is it? So a lot of the times actually, they're not using orchestra. It could be any agent. And I don't have the exact, uh, clarity on uh, whether it's just an LLM, but it is autonomous agent. So I guess they must be using real agent. Yeah, so, I think I go back to the previous analogy that you gave, right? If you look at business automation, not flow, I can figure a process based on an event, maybe an event kind of knockers somewhere, maybe, and I listen to that and then I can try a process. And I do I call that as an agent. It is not, right? So the reality of an agent in the context of Gen AI is, I mean, it has got a set of tools, it has got a set of behavior. And based on what you really want agent to do, it does. I mean, this is all prom driven. Yeah. Yeah, so that's what I was trying to, is when the product team talks about modernization and they're saying that modern agents. Are they exposing a set of actions related to the product? In an agent, and then an orchestration layer or something can engope that and then make it as part of that ecosystem. What is it? They are a tool and an Asian ecosystem, or are they truly an Asian agent called tools themselves, right? There should be like a litmus test that we put products through, is an Asian in what aspect? Yeah, sometimes that's what I'm trying to get. Anyway, so I don't want to derail you, right? So I think that's for the update. Okay, that's... I have the calls, right? Now, I really want to sit in and see what exactly this is. That's a debut as an example. Yep. Is there, are these calls scheduled yet, Monica? Yeah. So Friday, yeah, I've created the your learning series, Friday is our 1st one with DB2. And I can take these questions to them. I'm building, I gave them like high level points, what they should cover because the goal was that this 20 minutes of video, we can put it on our seismic page, as is. Yeah. And do you want to watch the recording of the video? Do you want to be on their live last questions? No, if time permits and I can be live, and otherwise, I'll mostly record it. Can you send a link to the event, to both of us, Monica? Of course, of course. Yeah. That would be lovely. Um... Okay. Um, so, there's, um, I'm working with them on... This is missing. Sorry, Rolando. This is missing the BVE. I have actually not communicated the BVE ask to carry it. But the success measures, basically, I'm not going to cover, cover this. I'll just switch next, is basically, so one is, I've also built the requirements. I did a survey with the FSM CSEs on the time it takes them to engage a product manager. And what are the times when, um, a modernization was stalled? So based on that, I'm building a framework of requirements for Kerry. They do not have an process right now. They don't have a form. Which says, go and submit the name of the this and this and we'll do that. So far, it's been ad hoc results. People knowing people, or somebody just escalating to Priya and saying, hey, we need a we need a product manager for this. So, um, So I think, uh, it's that time to decisioning, success metrics, you

know, any stored upgrades, and, and Rolando, we're already doing that in your Monday execution board in which, if I think that's, that's a great way to, to track as well, and then we can take that to Priya, um, and her leaders as well, um, on if there are any stalled, um, upgrades and so forth. That this is like a quick status. This is like just slide one. I would hate for this to be like for me to be a slide. Another thing which I'm really happy and a lot of the CSCs are adopting is not just represented, this in the business automation is the modernization with trust blueprint. So this was Krishna based on my experience as a client. So when, uh, at Kaiser, we were big IBM shop. With the whole workflow. Um, integration um, and so forth. And, um, it's not anymore, uh, an IBM shop now. So here's the reason. Um, like, uh, the SREs say that there's a lot of overhead, right? So IBM is not many times. And this makes many people uncomfortable. The 1st choice for a client when they're thinking about their modernization journey. They think, uh, snowflake, data breaks, um, Microsoft. So, what I'm pitching is pitching is that we do the modernization with trust. They worked with us, we worked with them. We be there, trusted partner. So according to art, CSE from Rernando's organization, would be that trusted partner or that execution lair or that 1st point of contact who owns that whole modernization. So managing product management, any of the gazillion, um, support teams or um, the account teams or the sellers. It's that trust, trust. So this is just the modernization. Again, I won't go in detail because I would really love your feedback. Um, I just pick, like, pick one and 2 in business flow, do, don't do, um, rip and replays, and then because again, because BAW is something which I owned as a product, so I just built, um, a template for, um, a BAW uh upgrade, you know, you know, when we are presenting this to clients, where is their current landscape? Where does BAW sit? What is their modernization approach and so forth? And then while we are doing that, we're also, so we start with the pain first. their current landscape and Lorendo, Rolando, that was a beautiful work. The way you impress B and Y. I usually don't go into the versions, that was a big learning for me, thank you so much. So, again, the CSCs keep track of what the current versions are, what are their pain points, any regulatory and audit requirements. And then when we understand that, when we are their trusted partner, then we start identifying one clean business flow with what are the dependencies for this? What are the audit requirements for this? And that one IBM owner, which manages. So when we do that for a pilot, for a small piece of business flow, we earn their trust. And while we are doing that, of course, we are unlocking the product capability as well. Then this is another one. This actually Rolando. included some of the business value in it. Why do they need to do this now? Why now? You know, some industry terminology as well. What breaks when you wait and why, how does this upgrade payback? So a little bit, yeah. I'll stop sharing now. I would love your feedback in some direction. Um, as well, and um, on what I should be more focusing on, um, What is your vision? How can we be more successful? How can I help more? So, um, Mother, do you have regular touch points where Kelopia and her Direct team? So, as it relates, killers that you're working on, are having, are, are we shortly still also in category of products? Are

you doing for every product which is there in portfolio, for photo or nice? So, with Priya's chief of staff and program director, I have a bi-weekly, like, or a weekly formal checkpoint. like a formal one hour session. Then with Priya, I had presented to her 2 weeks ago. Yeah, 2 Fridays ago, in her leadership meeting, in which she said, Yes, Monica, I understand these are the pain, and we want FSM to be our, um, like, um, a testing ground, so we want to work with you. You tell us what you want. Um, I had proposed a quarterly executive cadence with Priya and, um, as well with you, Rolando and everybody so that we can have that dashboard and maybe cover any, um, stored and what's working, what's not, but, um, I haven't gotten around to doing that yet. I'm just thinking, would it be overkill? Is that another meeting on, um, the executive's calendar, which is like, okay, what, Monica? you've done this now. What do you expect? You know, I just didn't want that overhead. While I'm getting the feel of them. So I think 1st thing, right now, the 1st priority, Rolando, what I'm doing is built up the requirements for their, uh, engagement, and it won't come easy. I think they will build an app, but right now it will still work as, so let me just actually, uh, show you my, uh, how I connect with them for now. It's very, um, very clugey. So I have, um... I have a running log. Um, the owners are Kerry, who is her program director for, uh, for core, um, software. Stacy is her chief of staff, and then Carson and myself. So, it's like, I keep the task, and then link it to the other notes, which I've made, the priority, um, and the status, and then this was, like, you know, it's like, this is a Krishna anar, this is, you know, this Rolando. So, yeah, so it's, it's very rough right now, and then on a daily basis, hey, Carrie, did you see this one? A reference diagram like just came, so, you know, clarified the request. Here's the reference architecture request. Um... This is from the UFI side, right? Yeah. Yeah. Yeah. Yeah. And then, um, then this ad hoc as well, right? So, uh, Brian and, um, The state farm team, Grand Paxton and others, and uh, Chancellor, they were drawing up this list of complaints with Priya on what they need for state farm. So I reviewed it yesterday with Graham Paxton. And I'm like, uh, grandma, a lot of these products are not under Priya. Some are under rethika. So let's just incorporate when Brian is going to Priya, I want to make sure that we've already pre- already knows about it, right? I, Because then it's like a mistrust between me and Priya, right? I'm already talking to Priya. So I don't want that, you know, it's uncomfortable if Brian is going with a new list of requirements to her. So, that as well. So ad hoc bases I included. Or Monica, can you work with the planning analytics product management to get us an extension for State Farm? Yes, State Farm is on a platinum support. So I'll do that as well. Um, I wish I could do more for clients. I wish I could be involved more with clients, especially when it's um, their business automation or their data portfolio, modernization. I really wish I could be doing that as well instead of just being, right now, I feel I'm just the coordinator, but I would love your feedback as well. Monica, on Redica, would it help if I sent her an intro email like I did for Priya? That would be very lovely. I would love to build my trust wrapper with Ritika as well. But she owns data, right? She owns data. She owns data, and she owns planning analytics as well. It is funny because DB2 and cockroaches owned by

Priya. But what's an extra data, business intelligence, planning analytics is owned by Retika. Got it. All right, I'll just repurpose the pre email, and I'll send it to Redica with you and Trisha on CC. I appreciate that. Thank you, Rolando. That would be really nice. Very helpful. So, I think Monica on the point that we made about being in front of clients that are known as... thing, yeah, you know, that's not the, if that's what you want to do. by all means, right? So, when we 2 know that your 40s business automation, there are Frank modernization engagements, applied discussions around that by organism, we should use Monica's expertise to drive those things. For sure. I would so love that. I miss working with clients. I miss building, even in my last role, which was a data and AI technical sales leader, I used to build demos. I used to work with the visa team and they would say, can you build us a demo with governance in it, in which when Asian Topps was not even there? I built an agent, an orchestrate, an incorporated governance. It just gives me so much motivation to, it gives me a paycheck, so that's motivation enough. But that makes me excited and passionate and um, it comes through. It comes through my happiness then, um, comes through. So I would absolutely love to do that, um, be more involved and be more helpful with client meetings. and so forth. But what else can I do? Um, There is some, and you and I discussed recently, Monica, uh, during our one on one is this idea of creating briefings, client-facing briefings across each of our pillars. Let's create an event at one Madison, around business automation. Let's create an agenda like the one that's being done for ANI. And you wanted Ali Hickey to be on the agenda, the panel session. You should do one for each of our pillars, and talk about, you know, the roadmap for the key products, maybe bring some GSIs even to talk about the capabilities they have. Success stories. That would be amazing to have product development, participate in that. Oh, for you to help us. Yes, I would love that. I would love that. And I know we have quite a large FSM presence in New York. That would be super, were you thinking of a time, like May or June or? We could do starting in April. Okay. Like, whenever? We can. I know we have a few already in April. There's one in Chicago, and then there's one we're doing in New York in April. AI focus. Should we combine it with AI focus or should we keep that separate? Oh, that's right. It's gonna be a separate event. Okay. But as soon as we can get it spun up, we can schedule for a half day, and also sit here. Also in Chicago. I was born in Austin, like wherever our clients are. That's, that would be phenomenal. That would be phenomenal. Would you want me to get regional tech exchange sponsorship? I did that last year. They paid for all of my events or is FSM going to cover it? If you can get funding from regional tech exchange, that would be even better. I guess we'll get you in front of class. Well, check that box. Yeah, yeah. I did that last year when Amy Tennyson was there. Amy is no longer in the company. I'll find out who sponsors. So Amy paid for all of my regional tech exchanges last year. So I'll check. Yeah, Dennis Dennis didn't pay a penny. Um, so yeah, I'll, I'll check definitely on that. Yeah. They allow us to sort of repurpose it, to be part of my focused. Yeah, they, as long as I put regional tech exchange in the event name, they're fine. Yeah, that's all their requirement is. Put regional tech

exchange in the event name. Um, they're fine, whatever I do in those. What do you think about that person? Regional events, or my focus by color, inclined in. So, I think we should begin, we should start with one. So, to see if we can really put plans together. Um, the closest one, the easiest one I can think of is the runtime organization. Yeah. Unwise. We could do last first, at runtime. Okay. At one time, uh, that's the most prominent one where we have a vast full of developers on a platform. The egg lanes, uh, I think. Um, who brings State Farm into that. Yeah, they're my favorite right now. Yeah. Yeah. Yeah. Okay. Anything else? Any, um, anything else you would like me to improve upon or add value? How? So, so, Mark, I think we should have this conversation ongoing maybe once in a month. Let's set this thing on. I'll do that. Broadly, 34 areas, right? So you seem to be doing all of that. One is making sure for all these verticals that you've got, that the team is driving, you got a connectivity point into the product organization. And that connectivity point is bidirectional. You're taking information back, you're feeding back, saying, Where are the gaps and what are the missing pieces, et cetera? And second, um, I think we should also, um, make it a, In some capacity, the product team should be included in the field as well as we're doing some of these modernization work. They cannot be disconnected, right? So, So as we get into wars or something else, you know, haven't contributed in some of the critical meetings in this country. Yeah. So there's, likewise, right? So we should, I think the initial discussion, we have a few months back when we wrote out this program, the product came permitted to be being part of this, right? And they happened so far. Yeah. And they, yeah. And Priya is very open, and Priya is actually based here. She's in my neighboring hometown. Um, SVL. So, um, If you want me to schedule something, um, in person, I can do that as well, work with her chief of staff. She is absolutely such a lovely person. I'm sure she would love to host you here as well in SVL. Um, So, I can do that with her, you know, maybe schedule something, you know, how is it going? you know, and more in more of an executive update. Or we can do it. digital, virtual, um, as well. Krishna. Sometimes in May or end of April or something, um, it's very nice here, very beautiful here. Allergies, a lot of allergies, but it's very beautiful here. You have, we have monthly reviews with Adam and Monica. The program, should we take that same material and schedule a monthly with pre-up, and Renica, say, hey, this is what's coming through. This is where we're going to need your help. These are a few success stories. Yeah. She... Yeah. You do the corn? We have the material anyway. I think it's gonna lead it anyway. I will take that. I will take that to her and her chief of staff. She wants to use us as a model for the whole market. Her words to me when I present it was, Monica, you're giving us attention, and we'll... be more than happy to help Afasam, because then we want to use your success as a base for others as well. I've started playing with Bob as well. Instead of asking Rolando, the CSEs to create these reusable assets, I think once we have a successful pilot, I can use Bob to recreate to create these assets as well. Which again, is for our client pitches, is great that because we are using, we are not, you know, we're using our own technology, our own champagne, to rebuild these assets. and I think Priya would Priya and Rithika would appreciate

that as well. for sure. Okay. So, sounds good, like a, thanks, and I need to jump on into something else and appreciate you doing and all that you're doing for us. Have a good day and I'll speak to you again soon. Thank you. Thank you. Thank you, Krishna. Thank you, Rlando. Thank you so much. I'm about to talk. All right. Thank you.
